Fingerprint system

SOMMER offers a reliable biometric access control system with this new technology. This way gates open even without any key or access card and by his fingerprint the user always has an unmistakable access authorisation with him.

Benefits:

- latest generation stripe sensor with high performance processor at low power consumption
- the system can't be deceived: accessible only by "living" fingers
- 4-channel activation: e.g. door and/or gate
- save up to 50-80 fingerprints¹⁾, assign administrator privileges to a maximum 9 fingerprints
- extremely secure transmission reliability due to the SOMMER radio technology with Somloq Rollingcode
- single users can also be deleted during their absence by the administrator
- enables navigation: recording of up-and-down movements, e.g. for specific selection of functions and memory cells
- quick and easy installation: no need to run wires

TECHNICAL DATA

Temperature range	-20 °C to +55 °C
Frequency ²⁾ (Somloq Rollingcode)	FM 868,8 MHz
Range ³⁾	approx. 50 m
Dimensions ⁴⁾	149 x 69 x 45 mm
IP code	IP54

Extremely high and fast fingerprint detection rate, weatherproof housing – despite snow and ice.

1) dependant on the complexity of the fingerprints. 2) also available in FM 434,42 MHz. 3) depends on the environmental conditions. 4) closed housing.

Last updated: 02/2015. Literal errors, errors and technical changes excepted.
